

EXPERIMENT 14

14. Create a Virtual Hard Disk and allocate the storage using VMware Workstation.

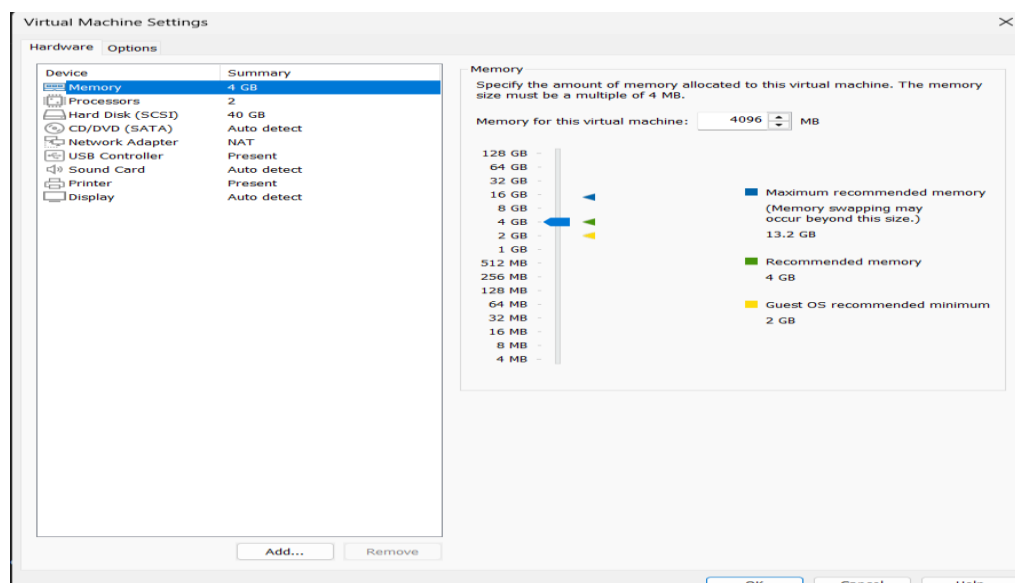

AIM:

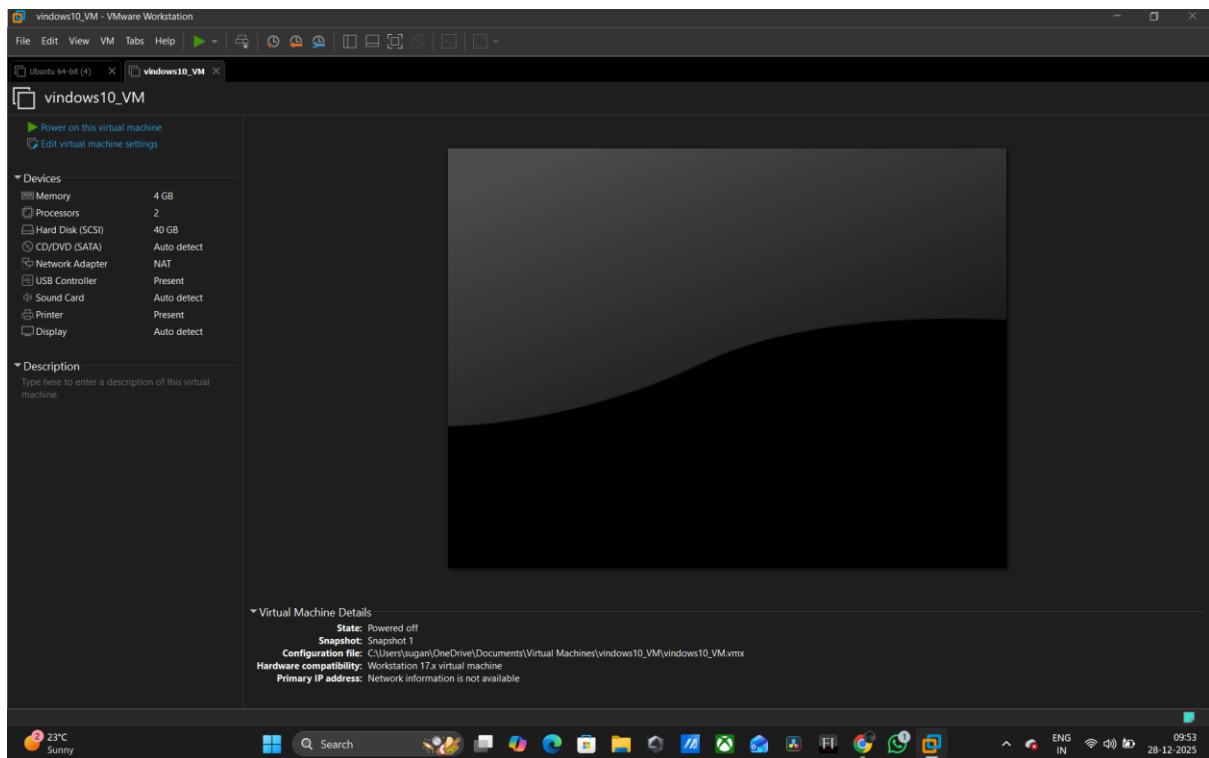

To create a new virtual machine and configure a virtual hard disk with a specified storage capacity, and to understand the process of allocating and managing virtual storage using VMware Workstation.

PROCEDURE:

1. Open **VMware Workstation** on the system.
2. Click on **Create a New Virtual Machine** from the home screen.
3. Select **Typical (recommended)** configuration and click **Next**.
4. Choose **I will install the operating system later** and click **Next**.
5. Select the **Guest Operating System** and its version, then click **Next**.
6. Enter a suitable **name for the virtual machine** and choose the storage location.
7. Specify the **size of the virtual hard disk** and select **Store virtual disk as a single file**, then click **Next**.
8. Review the virtual machine settings and click **Finish** to create the virtual machine.
9. Verify that the **virtual hard disk has been successfully created and allocated** in the virtual machine settings.

OUTPUT

RESULT

A new virtual machine was successfully created, and a virtual hard disk with the specified storage capacity was created and allocated using VMware Workstation.
